Representation
Engineered 93-d
EfficientNet-B0 1,280-d (frozen)
DinoBloom-B 768-d (frozen)
Single-cell image
Fusion (concatenate + standardise)
Patient-level model (T3)
Bag of ≤ 500 cell vectors
Gated attention
$a_k = \mathrm{softmax}(w^\top(\tanh(Vh_k) \odot \sigma(Uh_k)))$
$z = \Sigma_k a_k h_k$
→ linear → logit
Baseline: pooled mean, SD, P10/50/90 → logistic regression
Cell-level classifier (T1, T2)
Logistic regression or LightGBM
Temperature scaling + threshold (inner validation)
P(blast) / P(APL) + attention per cell
